Lake Bulletin: Seth, you seem to be quite the go-getter these days. Congratulations on being included on the dean's highest honors list with your 4.0 GPA. Do you have any advice for other students with similarly high aspirations?

Seth Rollins: GO TO CLASS! It may sound like common sense, but you will gain so much if you actually go to class and listen to what the professors have to say. In addition, don't be afraid to talk to your professors. They want to see you succeed and help you in any way they can. However, they can't do that if you don't talk to them. Finally, never be afraid to ask for help. I cannot count the number of people who have helped me in some way during my college career. I will probably never be able to thank them all individually, but I know that without them, I never would have been as successful as I have been.

LB: I see that you are majoring in Psychology. What made you choose that for your field of study?
SR: My junior year of high school, I took an Intro to Psych course out here at the campus with Dr. Hochstein. It was such an interesting subject I decided I wanted to study it further and eventually make it a career.

LB: Describe yourself in three words.
SR: Persistent, patient, friendly

LB: What is the last movie that you have seen?

LB: What do colleagues say is your best quality?
SR: My colleagues say that I am very charismatic and easy to talk to.

LB: Who has inspired you in your life?
SR: My parents: they're both really hard-working and have always believed in me. They have helped me realize that I can do anything I set my mind to.

What is your favorite study spot on campus?

new lake building
ACROSS FROM FACULTY LOTS

If you’ve been around Grand Lake St. Marys the past few years, you may have noticed warning signs for the quality of the water. As students and various passersby of Wright State University - Lake Campus, you may also have wondered, “What is going on next door?”

Enter The Agriculture and Water Quality Center.

Stemming from the community’s needs, the new 8,190 square foot will focus on agricultural education and the area’s water quality issues. Lake Campus is not new to the water quality game, having spent the last few decades studying the local watershed. The project is currently ahead of schedule, with the expectation of being open for Spring 2018 courses. With these innovations, we are well on our way to addressing the issues that affect our lake.
